Abstract: Internationally, Tourism can make an essential contribution to economic recovery and is acknowledged as playing a vital role in the transformation into a green economy (World Tourism Organization, 2010). In this respect nature-based tourism experiences evidently can become a significant feature of sustainable development.

Globalisation has transformed the world into a limited, even enclosed space, as well as it has transformed life, because of the need to reduce it to patterns. The success in tourism depends on the counteroffer, on the chance to escape at least for a brief period. Gunn defines "the tourist destination from the spatial point of view as a geographic region containing a critical mass of development that satisfies the objectives of the tourist. The main elements from the perspective of the tourist destination are the natural resources, the accessible transportation, the attractive services, the promotion and the information." But we have to add the most important element in order to have a real, stable tourist destination with chances to last: People who live in the region, the ones who are able to perform quality services and who may shape their life so that the "feelings" be possible in high quantities. They transform the daily loneliness into participation, in the same way as they want it during their holiday; the need to socialise is painful for those who are sentenced to the daily routine by the performing economic systems. A tourist destination means a multitude of elements, practically its natural ensemble, which is also built and human. "The artificial destinations" such as the holiday clubs, the cruises, start to be less popular, these being the image of a chaotic globalisation in tourism.

The clients who afford to tour return to the authentic. The effort must belong to the entire community: not only has the personnel from the tourist sector contributed to its success, but also all the people, including the local population.

It is obvious that the Romanian tourism construction must be started from the "destination".

For now, from the perspective of global tourism, of the tourist destinations, the Romanian tourism exists partially, but it does not operate at all wanted parameters. We must insist due to the importance of this concept. The destination is built for the tourist as well as the local people. It is also different from others, but it has a similar level of comfort and organisation of other destinations, so that the local person as well as the tourist should feel like home, through the natural facilities, in a clean and sustainable environment..
